AI Practice Plan Generator For Music Teachers

Perfect Timing

Product Ready

Unfair Advantage

+9 More

It's 9pm. The piano teacher finished her last student three hours ago. She's still at the kitchen table. Monday: C major scales, 10 minutes. Tuesday: measures 5-8 of the recital piece. Wednesday: the chord transition that keeps tripping him up. Same instructions, slightly different words. Twenty-three students. Then come the parent emails. Progress updates. Encouragement. Gentle nudges about practice. By 11pm she's done. Thursday she does it all again.

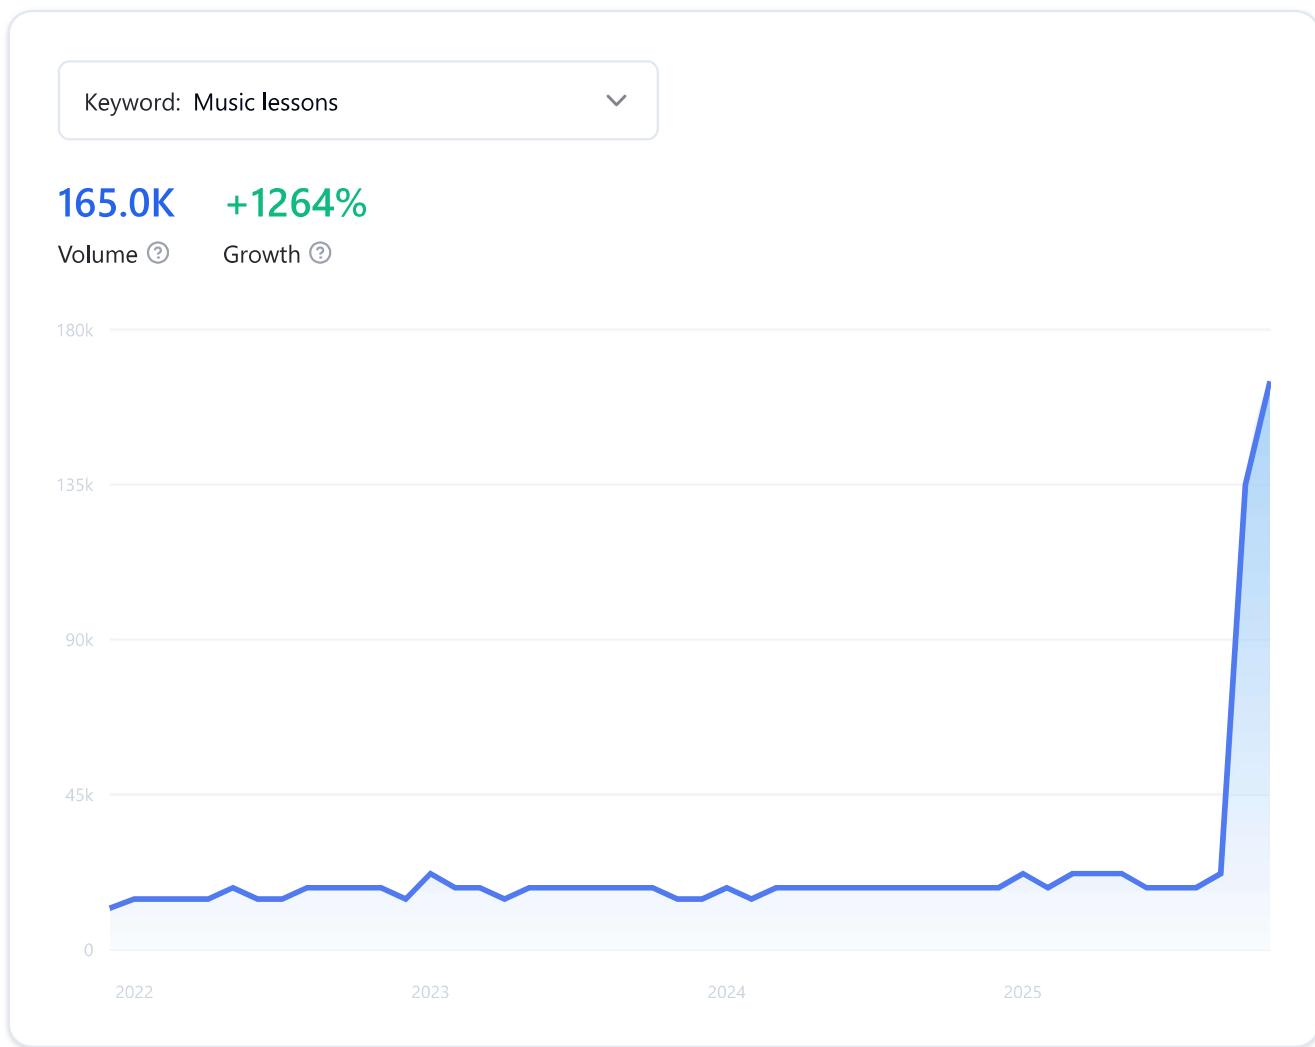

Note By Note listens so teachers don't have to write. Hit record on your phone. Teach the lesson like normal. The AI transcribes everything said, identifies what matters, and generates three outputs: a student recap highlighting wins and areas to work on, a practice plan broken into daily assignments, and a parent email summarizing progress. Each one editable before sending. Twenty minutes of typing becomes twenty seconds of review.

Build a mobile app with a record button and a clean output screen. Use Whisper for transcription. Feed the transcript to an LLM trained to extract musical

instruction: mistakes corrected, techniques introduced, pieces assigned, tempo targets mentioned. Generate the three outputs from templates tuned to how music teachers actually talk. Start with 15 piano and violin teachers. Record real lessons. Compare AI outputs to what they would have written manually. Tune until teachers trust it enough to send unedited.

\$49/month for solo teachers. \$99/month for studios. Over 100,000 private music instructors in the US. Most aren't capped by how many students they can teach. They're capped by how many emails they can stomach. Find them in music teacher Facebook groups, YouTube gear reviews, conservatory career offices. You only need 850 teachers to hit \$500K ARR. That's a realistic 12-18 month target.
