IDEA OF THE DAY: JANUARY 16, 2026

Diagnostic tool for appliance techs losing hundreds on repeat visits

The tech is standing in a customer's kitchen staring at a Whirlpool washer that won't drain. Error code F21. He Googles it. First result is a forum thread from 2014.

Second is a grainy YouTube video from someone who maybe fixed this model once. Thirty minutes gone and he hasn't opened his toolbox. He guesses. Orders a part. Wrong one. Callback scheduled. \$150-200 lost. Happens weekly.

Sure Fix ends the guessing. Snap a photo of the error code or say what's broken. The AI returns the diagnostic path. What to check first. Which part is likely dead. Where to order it. Sixty seconds from staring at a code to walking toward the van with the right part. The tech who used to dread mystery calls now clears them faster than routine jobs.
